# Who we are:

Sinclair College, a 2-year AND 4-year  
Community College established in 1887

30,000 students attending yearly

8,000 degrees and certificates conferred in  
2024-2025.

# Sinclair Locations

# Mentimeter Activity #1

- What are your opinions and feelings on AI?
  - In the integration of AI tools, what are some common obstacles you face at your own institution?
  - In one word, what would most help you move closer to adopting AI in your role?
- 

# Historical Perspective

# Gartner Hype Curve

Gartner

Source: Gartner (August 2024)

# Mentimeter Activity #2

Gartner

Source: Gartner (August 2024)

- Where is your institution on this cycle?

# Why this is so important

- **Enrollment and retention**
  - Student expectations are shifting toward AI-integrated learning
  - Programs must evolve to remain competitive
- **Workforce alignment**
  - Employers expect AI literacy across all disciplines
  - AI is becoming a baseline workforce skill
- **Risk and Compliance**
  - AI introduces risks in academic integrity, data privacy, and policy gaps
  - Institutions must proactively define acceptable use

**David A. Sinclair**

**“Find the need and  
endeavor to meet  
it.”**

# The AI EXCELLENCE INSTITUTE

---

## Internal Governance Considerations

Board of Trustees  
Resolution Action

\$5 million dollar  
investment

Merging of existing  
and new FTE/PT

# The AI EXCELLENCE INSTITUTE

---

A strategic 3-year initiative to position Sinclair as a leader in AI-integrated education, pedagogy, and workforce engagement.

# Institute GOALS

---

- Empower an AI-literate Campus
- Integrate AI Skills in All Learning
- Transform Teaching & Learning with AI
- AI-powered Personalized Learning
- Faculty & Staff AI Competency Development
- Industry & Community Engagement for Workplace Readiness

# Guiding VALUES

Human-Centered Innovation

Ethical Stewardship

Equity and Inclusion

Collaboration Across Disciplines

Civic Responsibility

# Year 1 Focus

- Hiring fellows and staff
- Course redesign begins
- AI programming launched
- Microcredentials developed

# Year 2 Focus

- Expand redesign efforts
- Build partnerships
- Integrate outputs into curriculum

# Year 3 Focus

- Scale AI literacy
- Institutionalize practices
- Expand partnerships

# Why eLearning Division

- Centralized digital infrastructure
- Supports online learning at scale
- Enables system-wide integration

# Faculty Fellow Model

Full release time

Division  
representation  
(STEM, LCS, etc.)

Work with  
departments

# Faculty Fellow Roles

- Lead professional development
- Support curriculum redesign
- Contribute to policy
- Bridge innovation and practice

# Strategy

## Driving Adoption

- Education-first approach
- Highlight success stories
- Department-specific solutions

## Localized Implementation

- Work with chairs & coordinators
- Align AI with program needs
- Faculty-led change

# Name programs and courses for AI-informed revision

# Lesson Learned: Faculty Resistance

- Timing of when to introduce AI
- It's NOT just reluctance—it's identity
  - Top-down approach does not work
  - Celebrate success and continue to discuss
  - *Resistance is often tied to professional identity and academic values*
- Misunderstanding of AI
  - Not just about cheating
  - Not just for tech majors
  - Misconceptions lead to both avoidance and overuse

# Lesson Learned: Student Resistance

- Reluctance to change
- Students are also hesitant
  - Fear of doing something wrong
  - Confusion about rules
  - Not all students have equal access to tools
- Environmental impact about energy use and sustainability
  - Large AI models require significant energy to train and run
  - Data centers consume:
    - Electricity
    - Water (for cooling)
  - Increased AI usage → increased resource demand

*Adoption requires cultural change, not just technical training*

# Lesson Learned: Defining AI Literacy

- No universal SMEs
- Need for general education AI skills
- Scaffold across curriculum

## Mentimeter Activity #3

- What are some institutional AI policies?
- 

# Policy

- Academic integrity
- Acceptable use
- Data privacy
- Transparency

**POLICIES for Faculty and Staff**

# Some examples of AI-friendly policies

## ✦ THE CARE MODEL ✦

# Some examples of AI-friendly policies

## "Disclosure of all AI use

Teamwork and its acknowledgment are highly valued in most careers, while taking credit for others' work is equally loathed. Justice and your personal reputation only grow when you share credit. Integrity begins by disclosing what help, tools, techniques, and technology you used: films, books, articles, and company reports all include acknowledgments of how the work was created.

- New technology is asking new questions about what should be disclosed. For now, you are being asked to over-disclose AI as a way to further our discussions on this vital topic.
- To that end, we will all disclose our AI use this semester.

While using another person's original work and using AI-generated content are not identical situations, taking credit for work you did not complete on your own and failing to properly cite it could still constitute a violation of Sinclair Community College's Academic Integrity Policy. Undocumented or unauthorized use of AI tools or other external materials may be interpreted as academic dishonesty.

Any use of AI tools to complete assignments must be clearly documented with each submission and must align with your instructor's acceptable-use policies. It is essential that you document all AI usage in the specific manner your instructor has outlined for your course section. It is preferable to provide more citations than necessary rather than fail to cite a source and jeopardize your grade.

If you are unsure which sources to cite, what your instructor's AI policies are, or how your instructor expects you to document your usage, contact your instructor directly. Instructor contact information is available in the course syllabus."

Welcome to Principles of Anatomy and Physiology!

# General Education & AI Rubrics

- Gen Ed AI Rubrics

- Artificial Intelligence (AI)
- Oral Communication
- Written Communication
- Information Literacy\*
- Critical Thinking\*
- Cultural Diversity and Global Citizenship\*
- Mathematical Reasoning and Problem Solving

# General Education & AI Rubric

- Apply AI tools and technologies ethically and effectively
- Analyze data, create content, enhance decision-making, and solve real-world problems.
- Integrate AI strategies to support academic inquiry, improve learning processes, and communicate ideas with clarity and integrity.
- Critically evaluate capabilities, limitations, biases and societal impacts of AI across diverse disciplines.
- Explain ethical considerations related to bias, privacy, security, and the responsible development, deployment, and regulation of AI systems in society.

# Training Success

- Development of [AI foundations course](#) for faculty, staff, and students
- [Transforming Assessment in the Age of AI](#) – Sinclair Community College
- [LibGuide on AI](#)
- [Sinclair AI cookbook](#)
- 92 training sessions through April
- ~ 3,000 individuals attended

# AI in Accreditation

- Health Sciences- Starting to see AI language emerge and need for reportable outcomes.
- With the Performance Indicator: Examine the trends, applications, benefits, and risks of AI and machine learning.
- How the curriculum prepares students to interpret AI-supported insights and participate in workflow or system build activities
- How the content aligns with Accreditation expectations related to data structure, governance, quality, and emerging technologies
- How to teach AI concepts using practical, real-world examples

# Examples of AI in Accreditation

- Experiential Learning- Agents for simulation learning, role play scenarios prior to clinicals. Assignments can be tied to General Education outcomes to foster communication and critical thinking.
- Evaluate AI outputs for bias- Embedded in Cultural Competence courses
- Use AI ethically
- Understand limitations
- Agents- Pharmacology, Treatment Planning, Labor, Burn Clinic, Patient Scheduling, DORIS

# Before vs After AIEI

- Before: Fragmented Efforts
- After: Coordinated Strategy

| Metric     | Before AIEI | After AIEI   |
|------------|-------------|--------------|
| Total CITs | 1,123       | 976          |
| AI CITs    | 366         | 357          |
| % AI       | 32.6%       | <b>36.6%</b> |

*CIT: Integrate AI Learning concepts into a course module for Fall 2026 in SCC 1101 to advance student AI knowledge and development.*

# How AI Usage Has Evolved

- **From Learning → Doing**
  - **Before AIEI:** Heavy on “*learn about AI*” (Professional Dev = 46)
  - **After AIEI:** Lower PD (25) but higher **Teaching use (244)**

*Faculty have moved from **exploration** → **implementation***

# Workforce Interaction or Community Ecosystem

- Employers
- K–12 partnerships
- Civic organizations
- AI advisory board
- Dayton AI Day

# Community Engagement Examples

- 9th grade AI symposium
- Training for partners
- Faculty and staff externships

# Key Take aways

- Implementing AI is a change management issue
- Buy-in is critical
- Invest in people, not just tools
- Governance is critical

# Thank You!
